Madagascar

Madagascar is an island country located in the Indian Ocean, off the southeast coast of the African continent, east of Mozambique.

The nation is comprised of the island of the same name, the largest in Africa and the fourth largest in the world, and numerous small outlying islands. It is separated from the mainland by the Mozambique Channel. Despite its current proximity to the African continent, Madagascar was originally part of the Indian subcontinent, from which it separated some 88 million years ago, for this reason, its isolation has favored the conservation in its territory of a multitude of unique species in the world.
