PROCEDIMIENTOS - EVALUACIÓN 3^{ER} PERÍODO

①

$$\frac{5}{x} \cdot x$$

$$f(x) = \frac{5}{x}$$

x	f(x)
1	5
2	2,5
3	1,6
4	1,25
5	1

Ax

x	x f(x)
1	5
2	5
3	5
4	5
5	5

$$③ \quad 3.000.000 + b$$

$$3.000.000 \times 6 = 18.000.000$$

$$3.000.000 \times 10 = 30.000.000$$

$$④ \quad 30.000.000 \cdot \left(\frac{5}{15}\right)$$

$$\frac{150.000.000}{15} = 10.000.000$$

$$⑤ \quad \begin{array}{r} 30.000.000 - 18.000.000 \\ 12.000.000 \end{array}$$

$$\begin{array}{r} 6.000.000 \times 3 \\ 18.000.000 \end{array}$$

$$\begin{array}{r} 30.000.000 \div 5 \\ 6.000.000 \end{array}$$

$$⑥ \quad 30.000.000 \% 1 = 300.000$$

$$\begin{array}{r} 300.000 \\ 245 \\ 1500000 \\ 1200000 \\ 600000 \\ 735.00000 \end{array}$$

$$735.00000 \times 12 = 8.820.000$$

$$\begin{array}{r} 8.820.000 + 30.000.000 \\ 38.820.000 \end{array}$$

$$⑦ \quad \log_2(x^2) + 3\log_2(x) = 10$$

$$2\log_2(x) + 3\log_2(x) = 10$$

$$2\log_2(x) + 3\log_2(x) = 10$$

$$(2 + 3) \times \log_2(x) = 10$$

$$5\log_2(x) \div 5 = 10 \div 5$$

$$\log_2(x) = 10 \div 5$$

$$\log_2(x) = 2$$

$$x = 2^2 \quad 2 \times 2$$

$$x = 4 \quad 4$$

$$⑧ \quad 9^{2x+10} = 27^{x-5}$$

$$3^{4x+20} = 27^{x-5}$$

$$3^{4x+20} = 3^{3x-15}$$

$$4x + 20 = 30x - 15$$

$$4x + 20 - 3 = -15$$

$$\underbrace{4x} - \underbrace{3x} = -15 - 20$$

$$x = -15 - 20$$

$$x = -35$$
