

Activity

- 1 write the words that you understand
- 2 write 5 different disasters that you watch in to videos
- 3 write 70 different places that you listen to the video
- 4 what are the effects of climate change?
- 5 who is scott franklin?
- 6 washington is the only cities that

Solution

1. two thousand one twenty five

• world

• like

• Planet

• San diego

• Today

• phenomenon

• American

• consequences

- Australia
- Japan
- destruction
- traffic
- future
- specific
- Africa

2 different disasters:

- **Drought in east Africa:** rising sea temperatures, linked to climate change, have doubled the likelihood of droughts occurring in the Horn of Africa region.
- **Heat wave in Europe:** this was a disaster that occurred in Europe, and according to reports from the world meteorological organization, in France a national record of 46 degrees Celsius was set. This heat wave significantly affected the Netherlands, where 2,964 people died from the heat.
- **Ecological and social collapse:** we see that droughts, floods and other natural calamities, which severely serve Bolivia and many other countries, mainly in food production, infrastructure and health, are nothing more than tangible samples that natu

ral, social systems and economics of the planet are on the brink of catastrophic change, a global crisis for which few societies are preparing.

• **The depletion of the planet's natural resources:** is drastically reduced due to overexploitation of the industrialized nations that each year consume 30 percent more resources than the earth manages to regenerate, that threatens both life on the planet and well being of humanity and the survival of nations and cultures ancestral models that have traditionally offered models and alternative practices in harmony with nature.

• **The Planet is overheating:** the planet is overheating and the climate is changing the exponential increase in global warming is causing extraordinary changes in the weather, disorders of the phenomenon of Niño and La Niña, droughts, floods, heat waves, hurricanes and tornadoes are getting stronger and more frequent.

3 Different Places:

- Hollywood
- Taj Mahal
- France
- Vatican city
- Sidney
- white house
- e-rapa
- Las Vegas
- Roman coliseum
- new orleans
- Washington
- New York
- african

4. What are the effects of climate change?

Global climate change already has observable effects on the environment. Glaciers have shrunk, ice on rivers and lakes is melting prematurely, habitats of plants and animals have changed, and trees bloom earlier. The effects that scientists predicted in the past to emerge from global climate change are happening now: loss of sea ice, accelerating sea level rise, and more intense heat waves.

5. Who is Scott Franklin?

Scott Franklin is a country fire consultant
