

Problejo

①

$$N = 9$$

$$r = 5$$

$$\frac{9!}{(9-5)! 5!} = 126$$

②

$$N = 45$$

$$r = 28$$

$$\frac{45!}{(45-28)! 28!} = 20$$

③

$$N = 5$$

$$r = 3$$

$$\frac{3}{5} = 0,6 \times 100 = 60\%$$

$$= \frac{60}{100}$$

a) el $\frac{1}{13} = 0,07 \times 100 = 7\%$

b) el $\frac{1}{52}$ de veratones

$$\frac{1}{52} = 0,01 \times 100 = 1,9\%$$

c) $\frac{3}{10} = 0,3 \times 100 = 30\%$

⑤

$$\frac{0,2!}{(0,2-60)!} = 0,250 = 20,5\%$$

$$0,2/60 = 3,33 \times 100 = 33,3\%$$
