

READING COMPREHENSION

1 Read the following text and answer the questions.

Taping and Bracing

Basketball players are more likely than any other sports players to injure their ankles. The most common ankle injuries among basketball players are inversion (turning inward) and eversion (turning outward) of the ankle. There are many factors that make basketball players especially prone to ankle injuries. The sharp twists, frequent running, constant jumping, and sudden stopping associated with

basketball put tremendous pressure on a player's ankle joint. The ligaments within that joint can only withstand so much force before tearing. Although there are several ways that players and trainers try to treat and prevent these injuries, there has yet to be a completely successful solution. Taping is the traditional method used by athletic trainers to treat ankle injuries. In this method, ankle tape is simply wrapped snugly around the ankle joint.

Taping can be beneficial, but it also has many drawbacks. It is criticized by athletic trainers and players alike. Taping is not very expensive when used once, but when used throughout the season, taping is three times more costly than bracing. This is due to the fact that tape must be reapplied for each practice and game, causing it to become very expensive over time. Taping also loosens with physical activity; after only ten minutes of exercise, the tape will become 50% looser. After one hour of exercise, taping offers no significant support whatsoever.

Bracing has proven to be more effective than taping in a number of different studies. It is also much more cost effective throughout a season. Several types of ankle braces are available for use, ranging from cloth lace-on braces to more rigid plastic braces. Braces decrease the range of motion of the ankle more than taping does, and, therefore, help to prevent future ankle injuries. However, despite the numerous benefits of ankle braces over ankle tape, bracing is still not a frequent practice for athletes. Although braces are easily applied and maintained, the attitude towards braces is fairly negative. Braces are believed to overly restrict movement capabilities and also cause discomfort.

Both taping and bracing are typically only used after a player has already been injured. One of the most common attempts to prevent ankle injuries in the first place is simply using a high-top shoe rather than a low-top shoe. Researchers have found that shoe height does not improve resistance to eversion moments, but does significantly increase resistance to inversion moments. But while high-top shoes may help protect players, players shouldn't spend a great deal of money on their shoes. Recent research has also shown that more expensive shoes often cause more ankle injuries than cheaper shoes. The air cells within the expensive shoes are thought to be responsible for this.

Vocabulary pag 220

1. Injure lesionar
2. Ankles tobillos
3. injuries Heridas
4. sudden Repentina
5. tremendous tremenda
6. withstand resistir
7. traditional tradicional
8. joint Articulacion
9. drawbacks Inconvenientes
10. alike similar
11. whatsoever lo que
12. throughout A lo largo de
13. therefore por lo tanto
14. However Sin embargo
15. Although A pesar de que
16. Attempts intentos
17. high-top cima mas alta
18. low top parte superior baja
19. Researcher Investiga
20. shouldn't No deberia
21. cells celulas
22. within dentro de

1. The primary purpose of this passage is to
- a provide doctors information about how to treat common ankle injuries
 - b warn basketball players about the dangers of ankle injuries
 - c inform readers about a common sports injury and ways to treat it
 - d explain to readers the best way to treat an ankle injury

2. Based on information in paragraph 1, the reader can infer that basketball players are more likely than baseball players to suffer an ankle injury because basketball players

- a jump and twist more than baseball players
- b wear low-top shoes, whereas baseball players wear high-tops
- c wear more ankle tape than baseball players
- d play more aggressively than baseball players

3. According to the passage, in which of the following ways is bracing a better choice for treating an ankle injury than taping?

- I. Bracing is less expensive when used over the course of a season.
- II. Bracing decreases the range motion of the ankle more than taping does.
- III. Bracing is often considered more comfortable than tape.

- a I only
- b I and II only
- c II and III only
- d I, II, and III

4. Which of the following statements from the passage represents an opinion, rather than a fact?

- a "Both taping and bracing are typically only used after a player has already been injured."
- b "One of the most common attempts to prevent ankle injuries in the first place is simply using a high-top shoe rather than a low-top shoe."
- c "Researchers have found that shoe height did not improve resistance to eversion moments, but did significantly increase resistance to inversion moments."
- d "But while high-top shoes may help protect players, players shouldn't spend a great deal of money on their shoes."

1. es la C ya que en el 1º parrafo se muestran un numero de casos de lesiones de tobillo entre los jugadores de baloncesto y tambien por que casi acabando el parrafo aparece "Although there are several ways that players and trainers try to treat and prevent these injuries there has yet to be a completely successful solution" esta oracion da la intencion de discutir una lesion y formas de contrarrestas.

2. es la A ya que en el primer parrafo se escribe "there are many factors that make basketball players especially prone to ankle injuries" esto quiere decir que esto se debe a que los pines bruscos y la las carreras frecuentes, y alas saltos constantes.

3. seria la B ya que en el segundo parrafo se escribe "when used throughout the season taping is three times more costly than bracing" esto hace referencia a la respuesta (I). en el 3 el autor dice "Braces decrease the range of motion of the ankle more than taping does and before, help to prevent future ankle injuries" lo cual hace a da respuesta a la (II) opcion. sin embargo en el parrafo 3 dice que a los jugadores no les gusta el uso de aparatos o braces porque "believe to reduce movement capabilities and cause discomfort" esto da a que se elimina la opcion (III) por lo tanto seria la (B).

4. prevenir torceduras de tobillo no es necesariamente el unico factor que los hace buenos (todas las opciones en (A) (B) y (C) presentan informacion que ya se sabe que existe o es verdadera como resultado de la experiencia o la observacion. En otras palabras, todos son hechos, por lo tanto la (D) es la correcta.

2 Read the following text and answer the questions.

Latin as a Second Language

Many people believe that it is **beneficial** to learn a second language. **Knowing** two languages makes it easier to travel to **foreign** countries, communicate with people from other cultures, and conduct international **business**. Even if you do not learn to speak another language **fluently**, studying a language is a useful academic exercise because it requires concentration and logical **thinking**. Some people choose to learn Latin, which is a dead language.

Latin has not been spoken for over a **thousand** years. **Nevertheless**, schools in many different countries offer courses in Latin. Some **argue** that Latin can help English speakers build their vocabulary, since many English words are derived from Latin. Latin is also the **basis for** all of the modern Romance languages. If you already know Latin, languages like Italian and Spanish will be **easier** to learn. **Nonetheless**, if you choose to study a language that no one speaks **anymore**, many of the practical **advantages** of learning a second language are erased. This means you should think **carefully** about which language you choose to learn.

1. The author apparently believes that Latin is

- a completely useless as a second language
- b less useful than spoken languages
- c useful for English speakers but no one else
- d more useful than other dead languages, such as ancient Greek

2. Based on information in paragraph 1, it can be understood that the word **beneficial** belongs to which of the following word groups?

- a healthy, wholesome, nutritional
- b wise, smart, intelligent
- c advantageous, helpful, valuable
- d common, usual, customary

3. Based on information in the passage, it can be understood that a "dead language" is a language that is

- a over a thousand years old
- b not spoken anymore
- c useful for learning modern vocabulary
- d the basis for other languages

4. Someone who knows Latin will likely be able to

- I. think logically
- II. learn Spanish easier
- III. communicate with foreigners

- a I only
- b I and II only
- c II and III only
- d I, II, and III

5. According to the author, Latin can be helpful for English speakers because it is

- a the basis for all of the modern Romance languages
- b a way to conduct international business
- c taught in schools in many different countries
- d a way to help build their vocabulary

6. As used in paragraph 2, something that is derived must

- a come before something else
- b come from something else
- c be the same as something else
- d replace something else

7. The author writes, "If you already know Latin, languages like Italian and Spanish will be easier to learn." Assess this argument. Is this a strong enough reason to learn Latin instead of simply learning Spanish first? Why or why not?

No it is not a subject enough reason to learn Latin, because although Spanish is derived from Latin, they are different languages
