14. Leaf bugs
15. Gray mouse lemur

MIOMBO

The miombo stretches across Mozambique, Angola, with an area of about 5 million square kilometers, making the miombo forest the largest expanse of dry forest in the world.

The miombo is characterized by the predominant presence of these species that grow in the semi-arid areas of the tropical savannah or rocky savannah.

A characteristic of the trees is that their leaves change for a short period of time to golden and red colors.
